

# PIAAC Cycle 2

**2018 AIR PIAAC Research-to-Practice Conference**

**Irwin Kirsch**

**ETS**

**December 6-7, 2018**

**Arlington, VA.**

# Overview

---

- What is PIAAC Cycle 2?
- What's new for Cycle 2?
- Why is this survey important?
- Bonus opportunity while you are waiting for Cycle 2 data

## What is PIAAC Cycle 2?

- PIAAC is a household survey of adults 16–65 years of age in 33 participating countries
- It provides the direct assessment of 3 cognitive domains – literacy, numeracy & and a new domain called adaptive problem solving
- Extensive BQ that provides a broad range of information that sheds light on the distribution of cognitive skills, why these skills are important and factors that contribute to skill acquisition and decline

# Which countries are participating?

Austria  
Belgium (Flanders)  
Canada  
Chile\*  
Croatia  
Czech Republic  
Denmark  
Estonia  
Finland  
France  
Great Britain  
Germany  
Hungary\*  
Ireland  
Israel\*  
Italy  
Japan  
Korea  
Latvia  
Lithuania\*  
Netherlands  
Norway  
New Zealand\*  
Poland  
Portugal  
Romania  
Russian Federation  
Singapore\*  
Slovak Republic  
Spain  
Sweden  
Switzerland  
United States

# Structure of the background questionnaire

- A: Socio-demographic
- B: Education & Training
- C: Current status / Work History
- D: Current Work
- E: Last Job
- F: Skill use – work
- G: Skill use – everyday life
- H: Work environment
  - I: Non-economic outcomes
- J: About yourself
- K: Social emotional skills (Big 5)

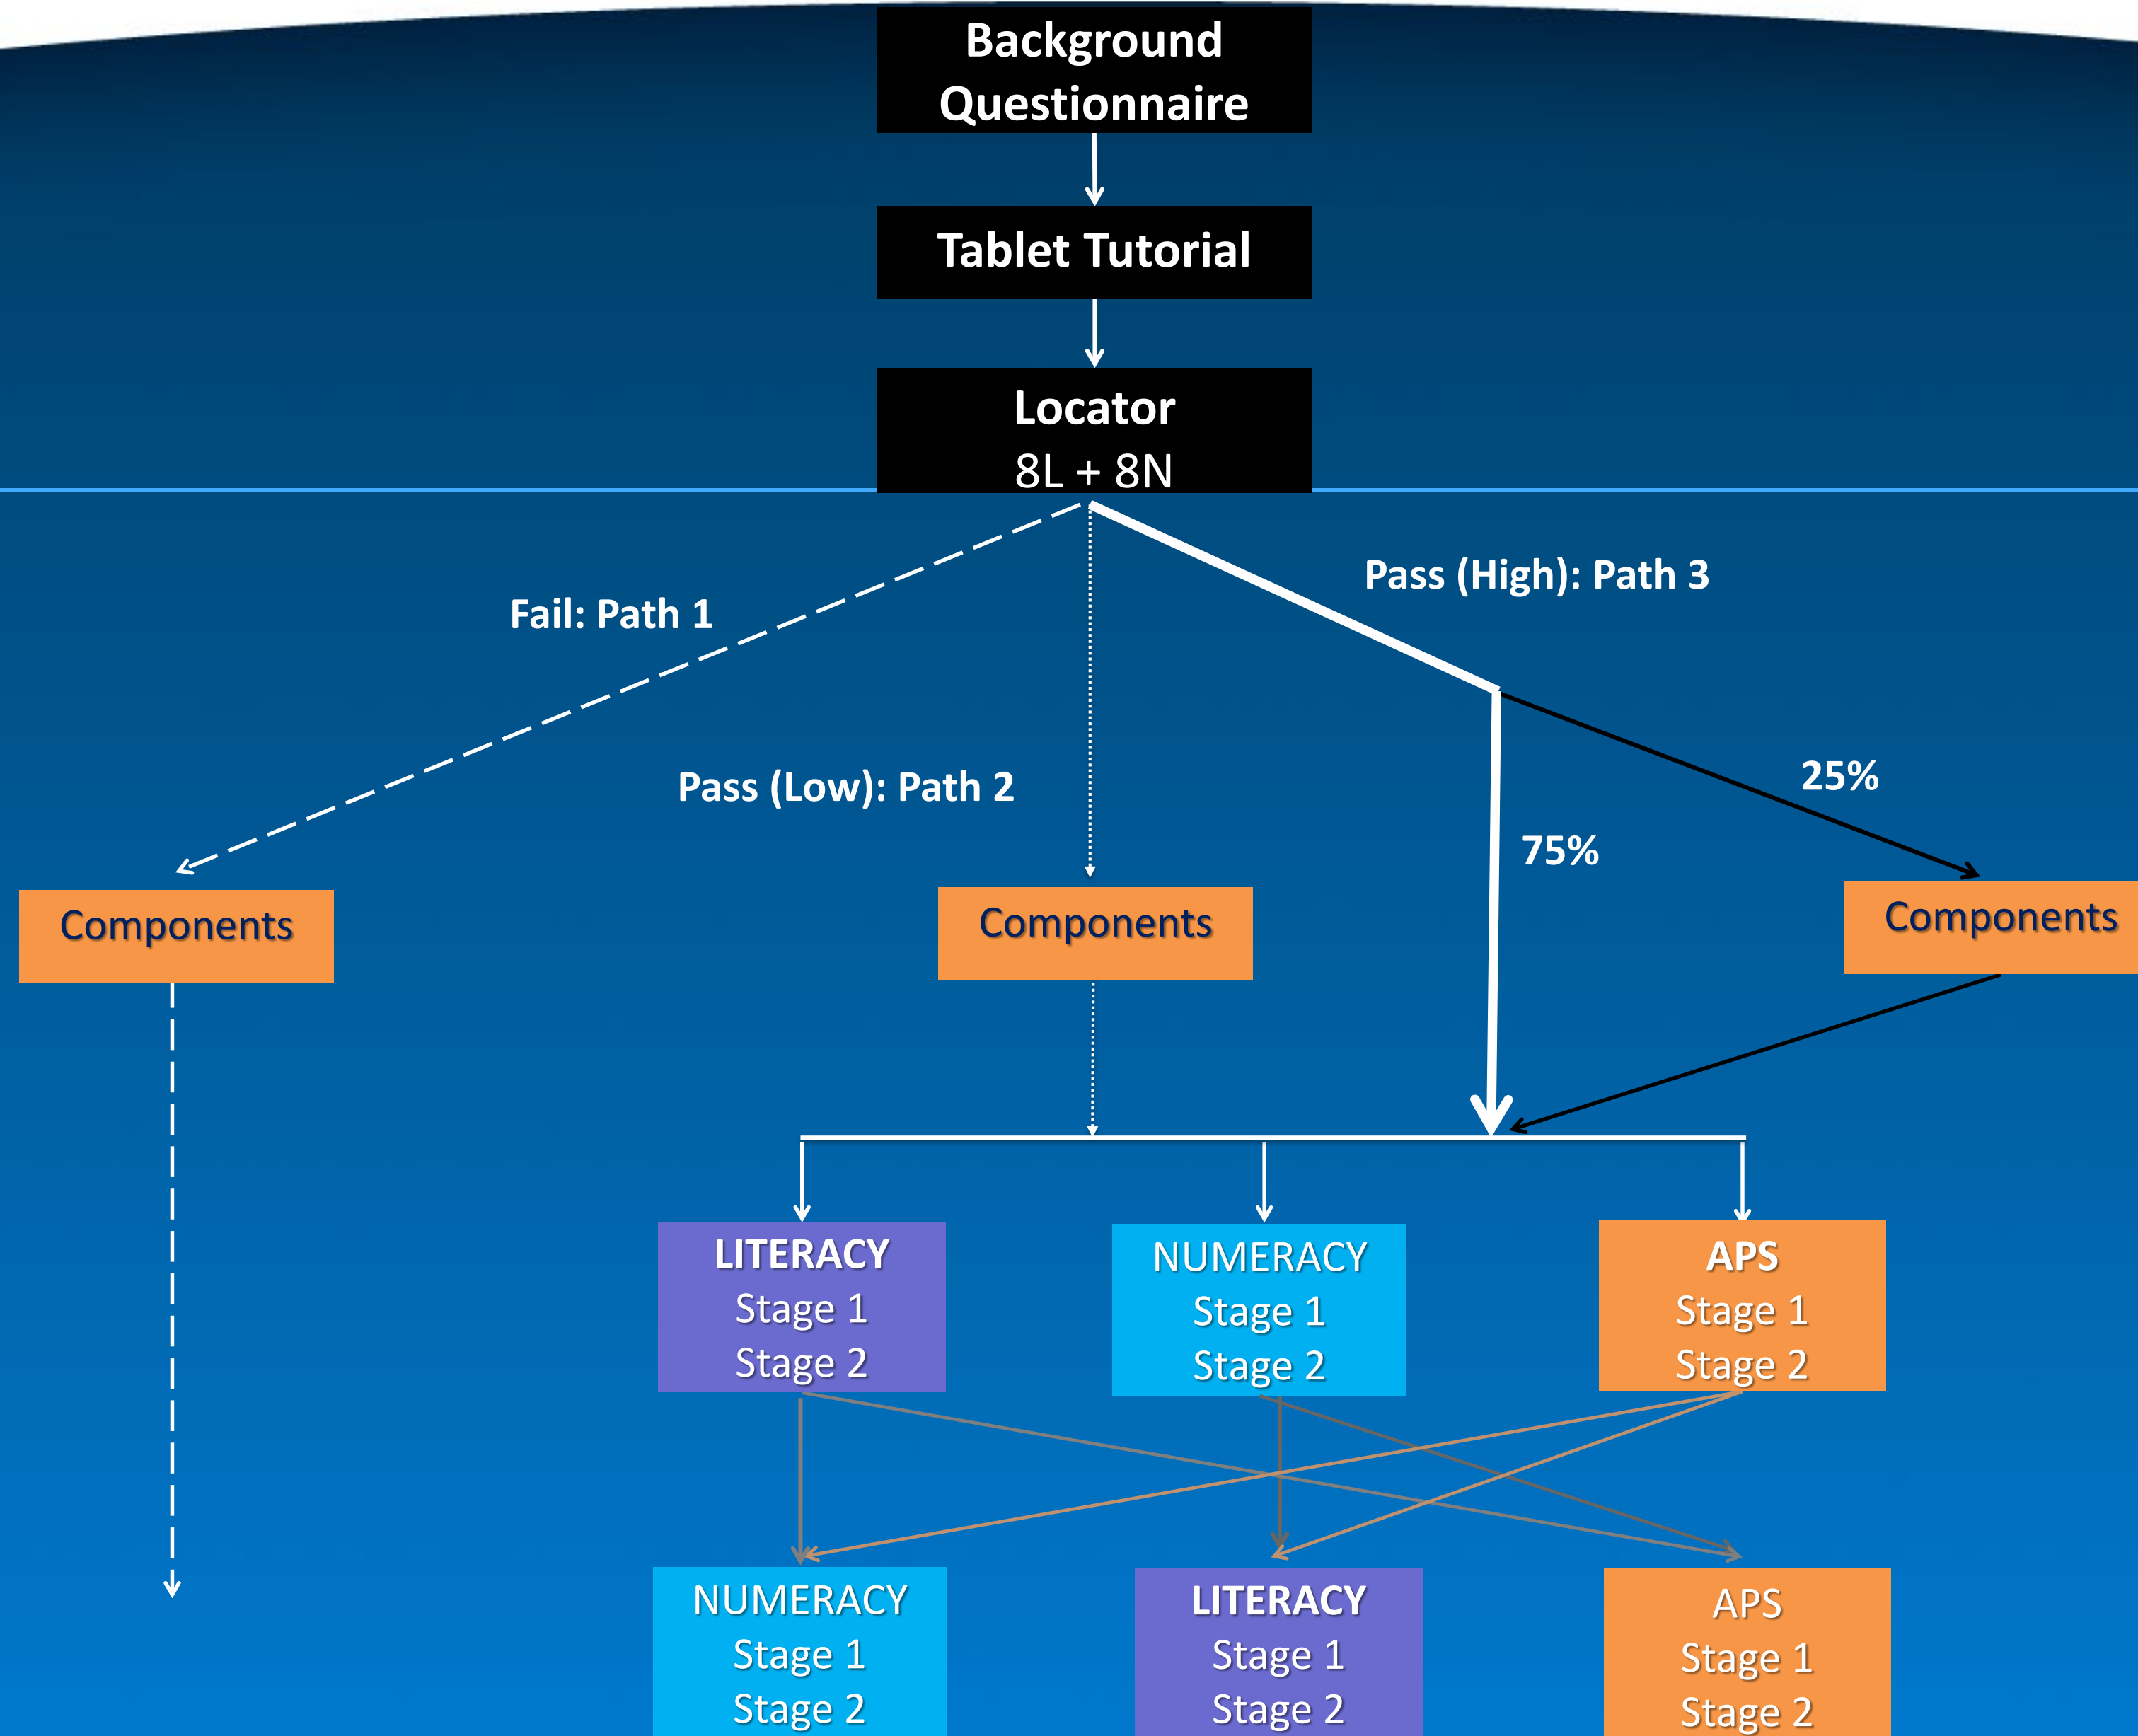

## What's new for Cycle 2?

- Update conceptual frameworks for each of the cognitive domains as well as for the background questionnaire
- Extend the measurement of literacy and numeracy skills by creating new items that reflect the updated frameworks
- Include component measures of both reading and numeracy
- Include adaptive problem solving as a new domain
- Introduce the use of a tablet platform to extend the range of adults who can participate in technology based assessments
- Expand access to and use of log-file and process data

## Advantages of Tablet Delivery for Cycle 2

---

- Expand the types of information collected and the range of adults who are able to participate in technology based assessments
- Improve data quality and scoring efficiency with automated data capture and scoring
- Timing and process data can be collected for items across all participants
- Adaptive testing can be used for all respondents
- Scoring burden is eliminated for countries
- Item-by-country interactions due to delivery differences will be eliminated

# Why is PIAAC an Important Assessment?

- It broadens and complements the type of information that is collected in school based surveys
- It deepens our understanding of the relationships between education, skills and life outcomes
- It provides important information on trends over time and among selected subgroups'
- It draws the interest of a diverse group of researchers
- It will provide increased access to log-file and process data

# Additional Cycle 1 data to be available in 2019

	<b>TOTAL</b>	<b>16-34</b>	<b>16-65</b>	<b>&gt;65</b>
2012 / 2014	8670	4138	7921	749
2017	3660	1158	3296	364
2012/14/17	12,330	5,296	11,217	1,113

# Global ICT Developments, 2001 - 2017

# PBA Path by Age and Country, Cycle 1

Nearly half of PBA respondents were above 55 in cycle 1, and they will be above 65.

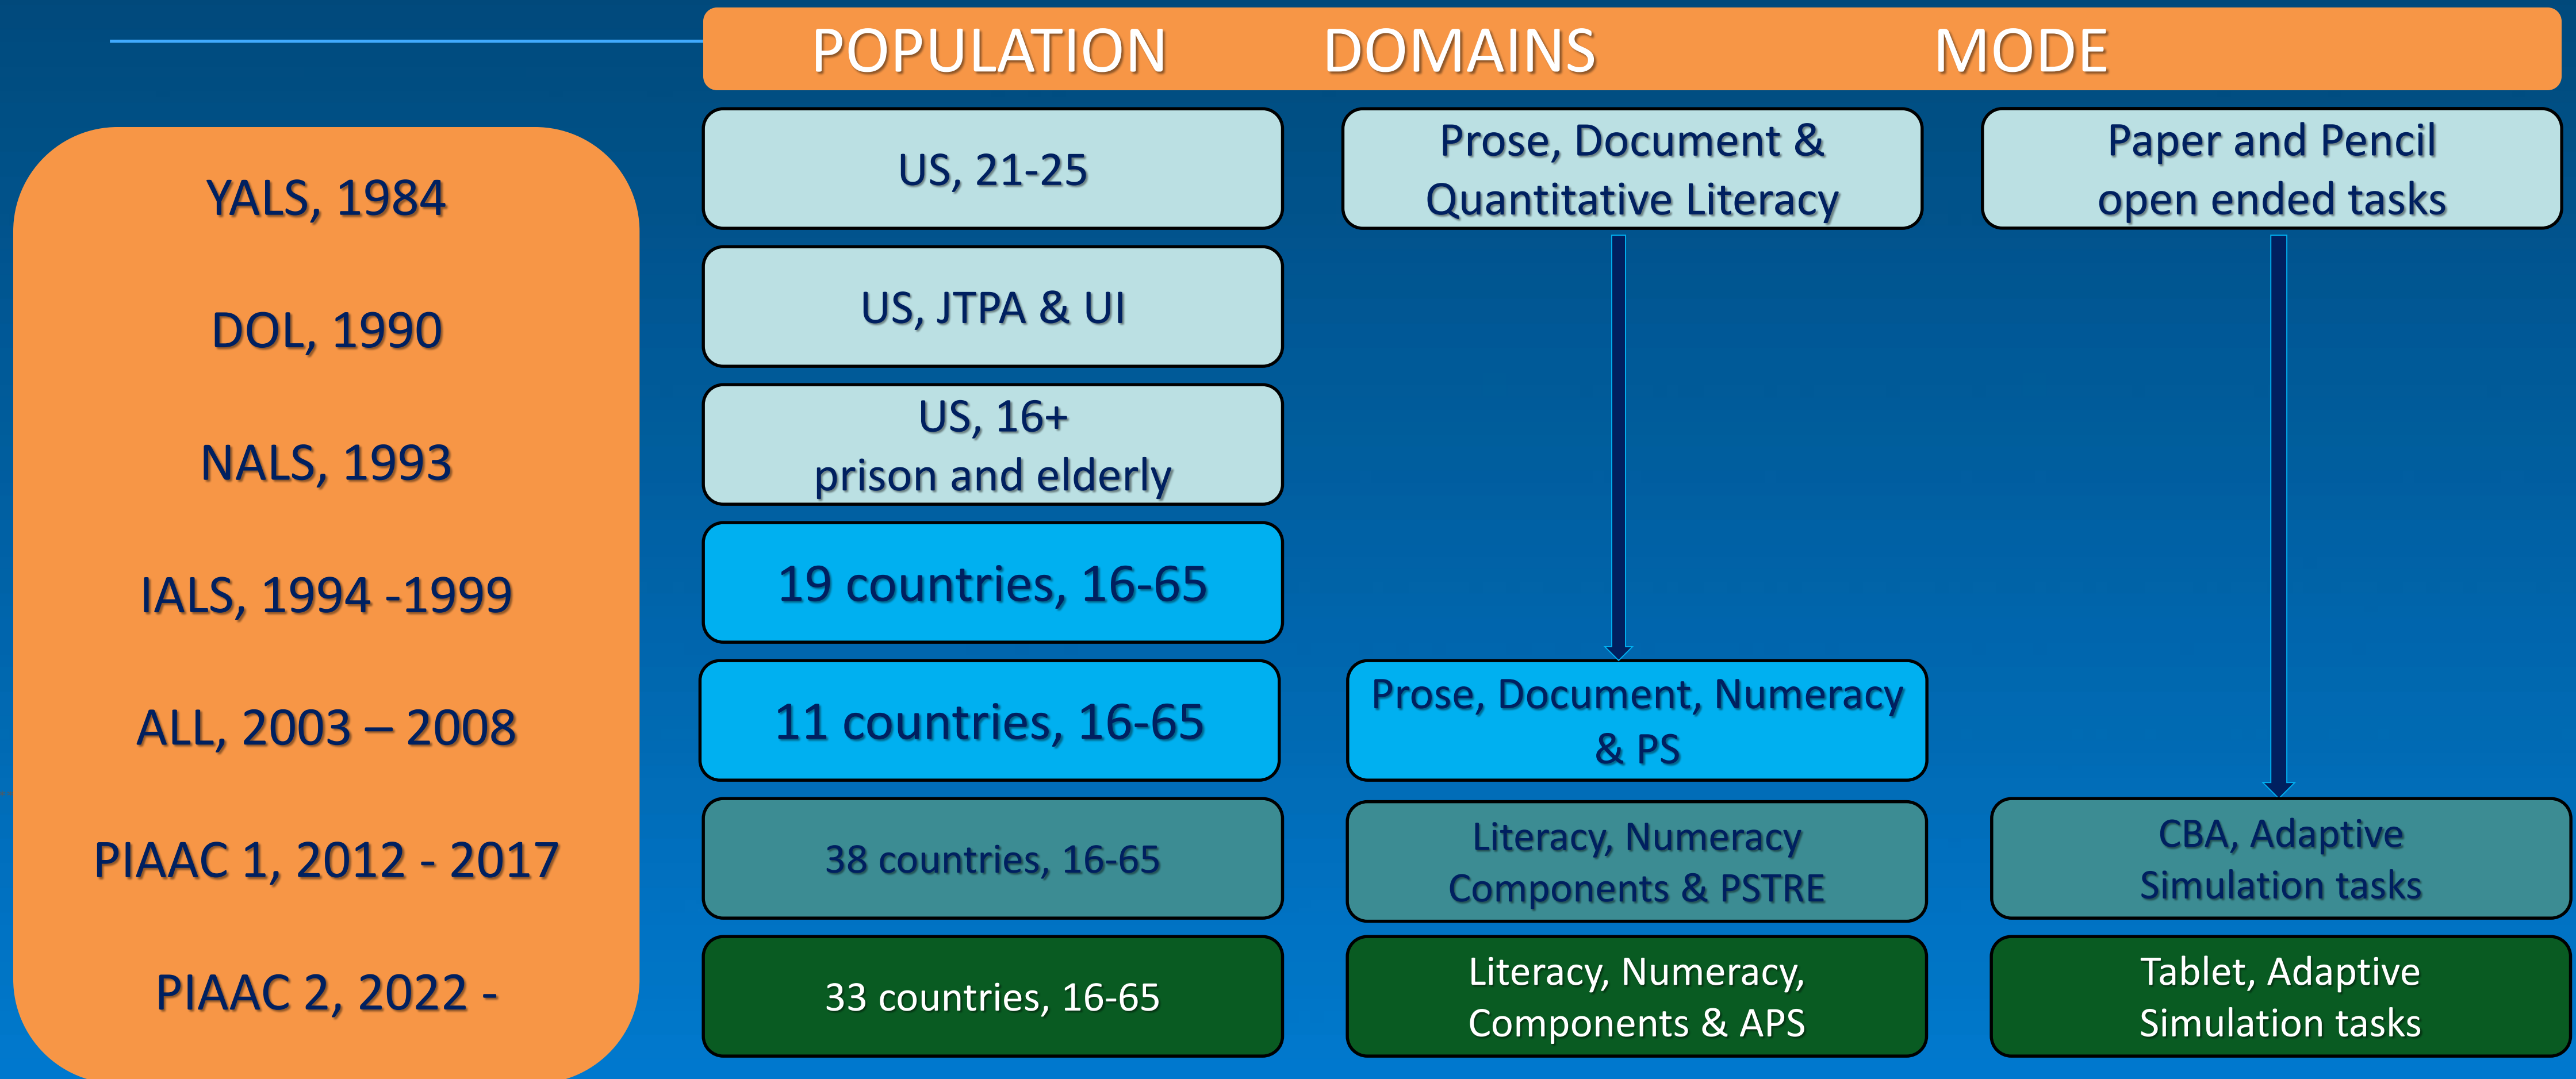

## PIAAC Cycle 1 was the first survey of adult skills to ...

---

- be fully designed as a computer-based assessment
- include a complex design that provides a statistical link over time and across modes
- utilize multi-stage adaptive testing
- include fully automated scoring of open-ended items
- incorporate a broader range of information available in the log files to refine scoring and model proficiency information

# Where did PIAAC come from?

## The Direct Assessment
