

Persisting Gaps:  
Labor market Outcomes and Numeracy  
Skill Levels of First Generation and  
Multi Generation College Graduates

Karly Sarita Ford and Mark Umbricht,  
The Pennsylvania State University

AIR-PIAAC Research Conference 2015  
Washington, D.C.

# First Generation vs Multi Generation College Graduate

- First Generation: A college graduate who does not have a parent who attended college
- Multi Generation: A college graduate who has one or more parents who attended college

# First Generation college students

---

- Rates of application, academic preparedness, enrollment, engagement, persistence and graduation

# Status Attainment paradigm in sociology

Blau and Duncan 1967; Sewell, Haller and Portes  
1969; Haller and Portes 1973; Hout 1980; Hout 1985

“Origin status affects destination status among workers who do not have bachelor’s degrees, but college graduation *cancel*s the effect of background status.”

Hout, 1988, p1358, emphasis added

# What about skills?

- Status attainment assumes the education attainment is a proxy for skills

# Research Questions

- RQ1. Is there a difference in skills (numeracy scores) between first-generation college graduates and multi-generation college graduates?
- RQ2. Is college graduate generational status related to labor market outcomes after controlling for skills (numeracy score)?

# Significance

- Add nuance to the Status Attainment Paradigm
- Track First Generation College graduates post-college

# Analytic Strategy

**RQ1. Is there a difference in skills (numeracy scores) between first-generation college graduates and multi-generation college graduates?**

Dependent variable: Numeracy (OLS regression)

Covariates: Gender, Age, Race/Ethnicity, Nativity, Grad school attendance

Multiple imputation to account for missing data

Appropriate weights and plausible values were used

# Analytic Strategy

**RQ2. Is college graduate generational status related to labor market outcomes after controlling for skills (numeracy score)?**

Dependent variables:

- Monthly earnings (OLS regression)
- Employment status (Logistic regression)
- Occupational prestige (OLS regression)
- Major-occupation match (Logistic regression)

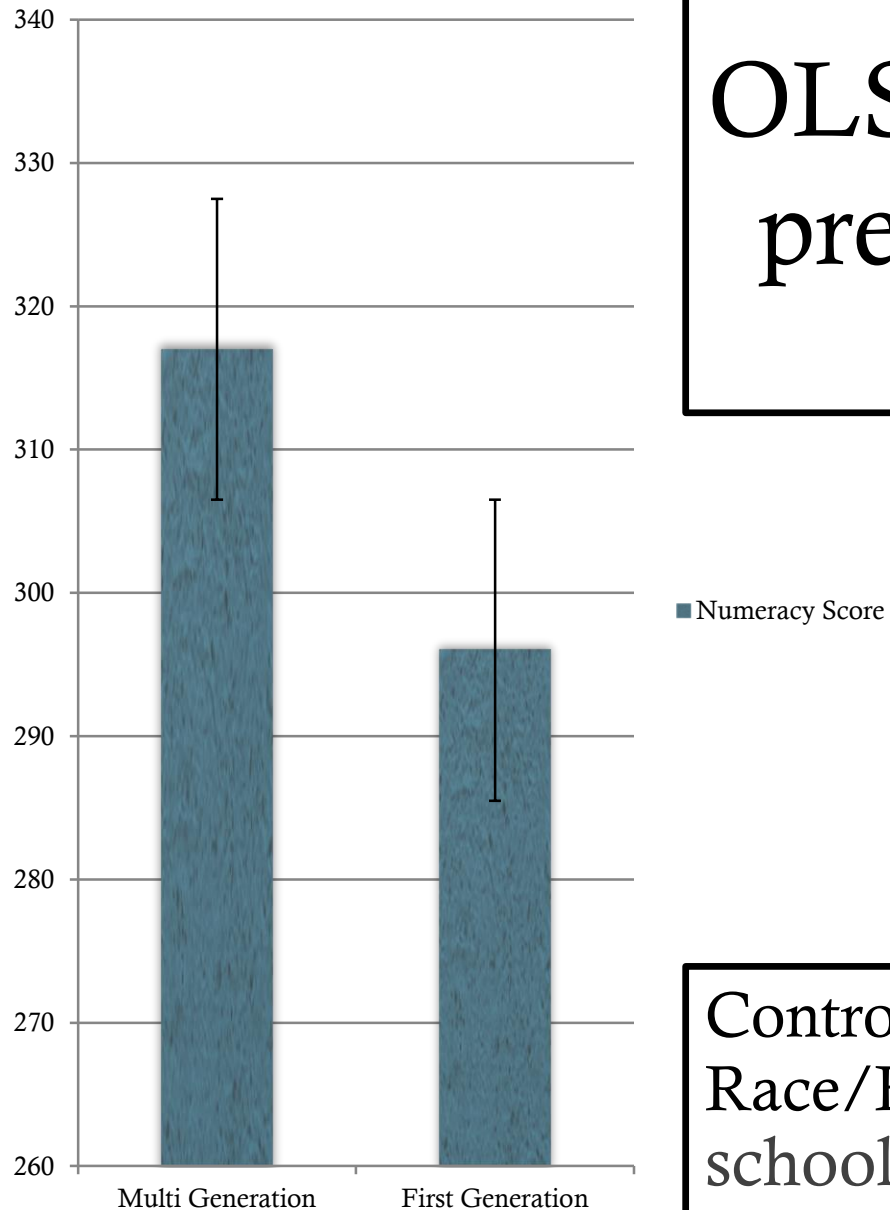

Covariates: Numeracy skill, Gender, Age, Race/Ethnicity, Nativity, Grad school attendance

Multiple imputation to account for missing data  
Appropriate weights and plausible values were used

# Sample

- USA PIAAC data
- College graduates (Bachelor's degree)
- Age 25 to 54
- $N = 1,035$

## Numeracy Score

OLS model coefficients  
predicting Numeracy

Control variables: Gender, Age,  
Race/Ethnicity, Nativity, Grad  
school attendance

## Numeracy Score

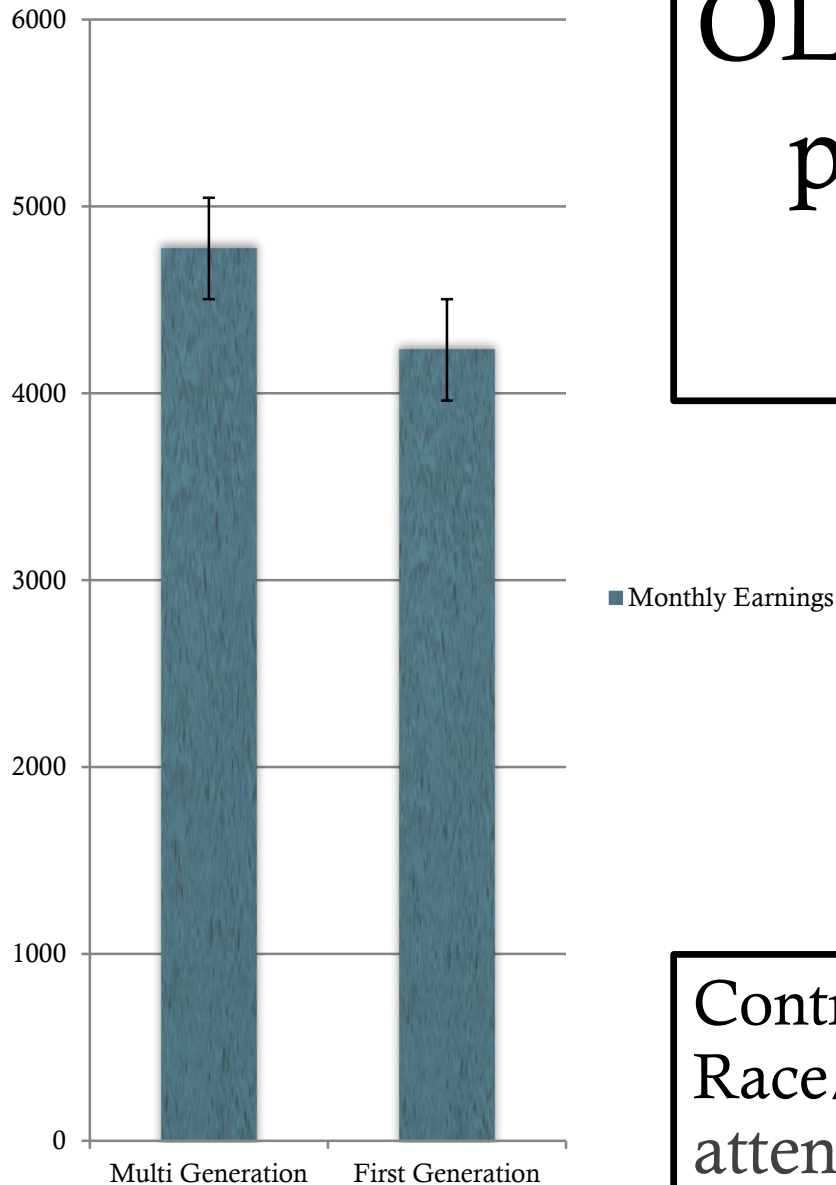

OLS model coefficients  
predicting Numeracy

Multi-Generation college graduates  
out-score First-Generation college  
graduates by over 20 points

Control variables: Gender, Age,  
Race/Ethnicity, Nativity, Grad school  
attendance

## Monthly Earnings

OLS model coefficients  
predicting Monthly  
Earnings

Control variables: Gender, Age,  
Race/Ethnicity, Nativity, Grad school  
attendance

## Monthly Earnings

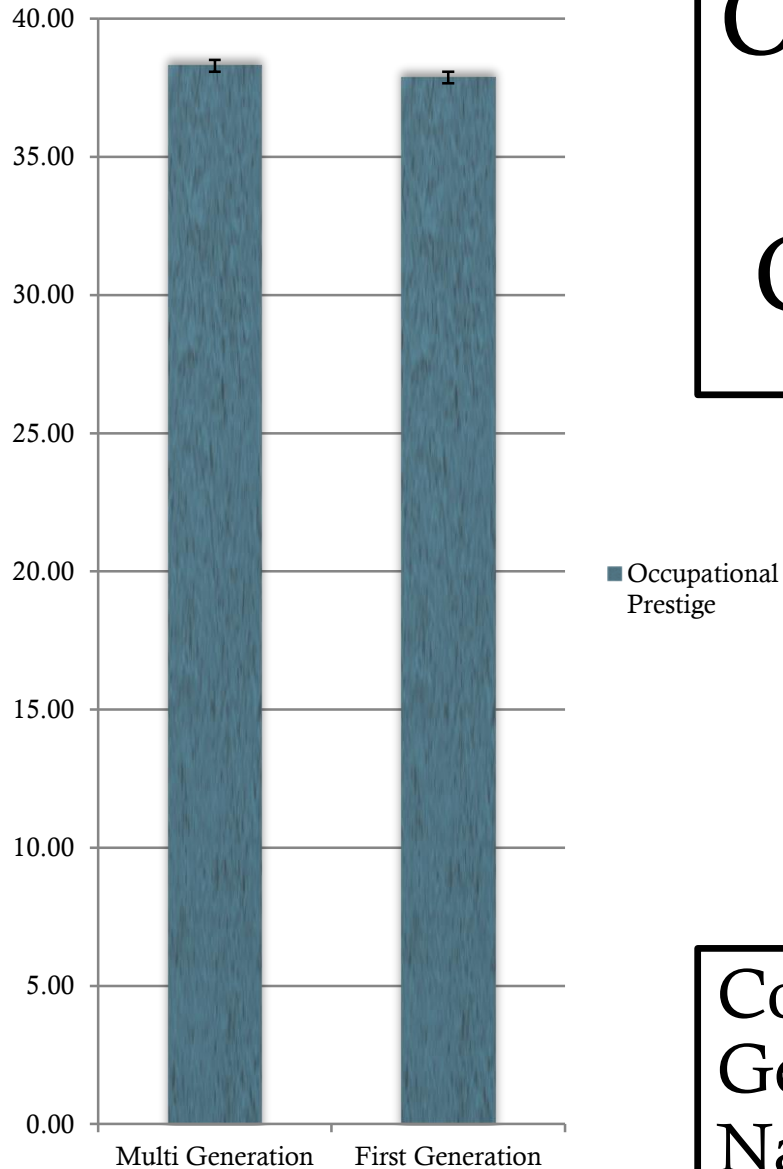

OLS model coefficients  
predicting Monthly  
Earnings

Non-significant difference in monthly earnings for Multi-Generation and First-Generation college graduates

Control variables: Numeracy Skills, Gender, Age, Race/Ethnicity, Nativity, Grad school attendance

## Occupational Prestige

OLS model coefficients  
predicting  
Occupational Prestige

Control variables: Numeracy Skills,  
Gender, Age, Race/Ethnicity,  
Nativity, Grad school attendance

## Occupational Prestige

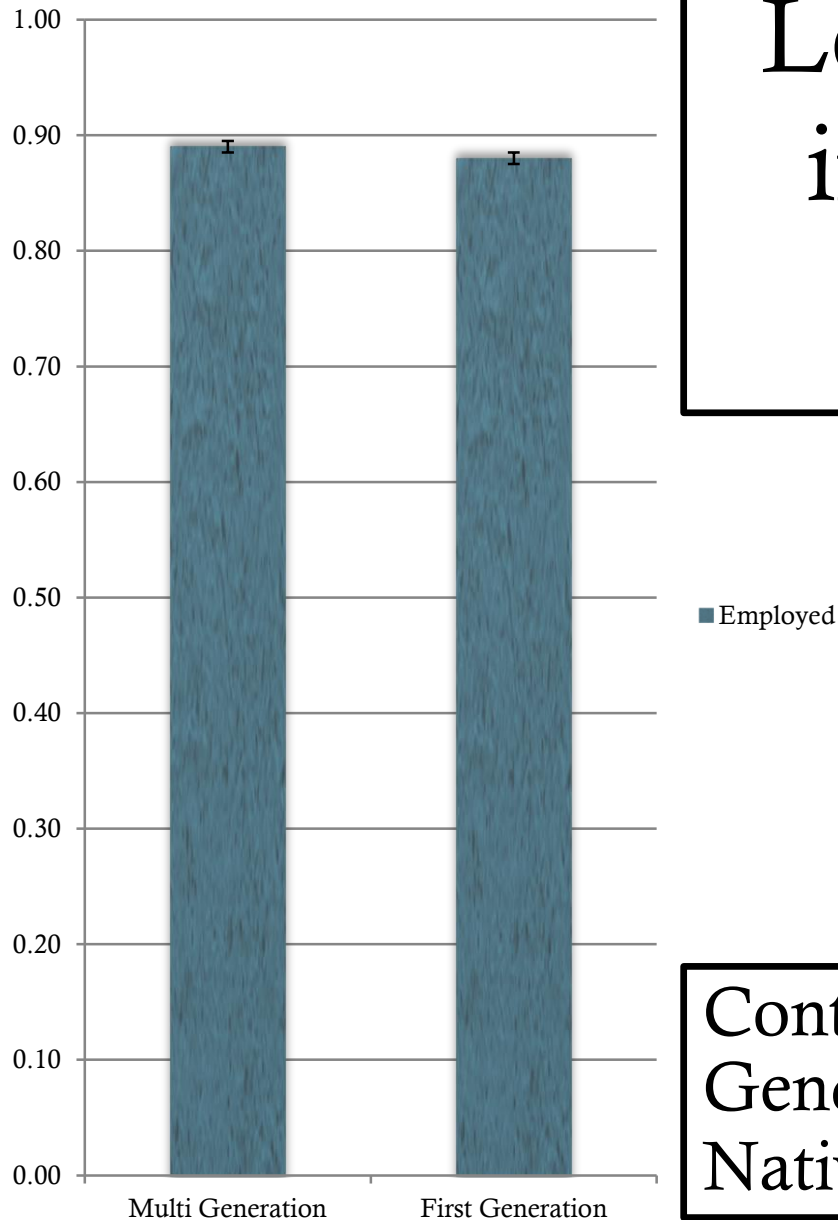

OLS model coefficients  
predicting  
Occupational Prestige

Non-significant difference in occupational prestige for Multi-Generation and First-Generation college graduates. Both had average occupational prestige scores of around 40.

Control variables: Numeracy Skills, Gender, Age, Race/Ethnicity, Nativity, Grad school attendance

## Employed

Log Odds (converted into probability) of being employed

Control variables: Numeracy Skills, Gender, Age, Race/Ethnicity, Nativity, Grad school attendance

Log Odds (converted into probability) of being employed

Non-significant difference in likelihood of being employed for Multi-Generation and First-Generation college graduates. Both have around a 90% likelihood of being employed.

Control variables: Numeracy Skills, Gender, Age, Race/Ethnicity, Nativity, Grad school attendance

## Occupation-Major Match

Log Odds (converted into probability) of Major-Occupation Match

Control variables: Numeracy Skills, Gender, Age, Race/Ethnicity, Nativity, Grad school attendance

## Occupation-Major Match

Log Odds (converted into probability) of Major-Occupation Match

Non-significant difference in likelihood of a Occupation-Major Match for Multi-Generation and First-Generation college graduates. Both have 60% likelihood of matching.

Control variables: Numeracy Skills, Gender, Age, Race/Ethnicity, Nativity, Grad school attendance

# Discussion

- When controlling for skill, First generation and Multi generation college graduates have similar labor market outcomes:
  - Earnings
  - Occupational prestige
  - Rates of employment
  - Major-Occupation match

# Discussion

- When controlling for skill, First generation and Multi generation college graduates have similar labor market outcomes:
  - Earnings
  - Occupational prestige
  - Rates of employment
  - Major-Occupation match
- Multi generation college graduates out-score First generation college graduates in measures of numeracy skill

# Status Attainment paradigm in sociology

Blau and Duncan 1967; Sewell, Haller and Portes  
1969; Haller and Portes 1973; Hout 1980; Hout 1985

# Status Attainment paradigm in sociology

Blau and Duncan 1967; Sewell, Haller and Portes  
1969; Haller and Portes 1973; Hout 1980; Hout 1985  
**Ford and Umbricht 2015**

# Policy Implications

- College does not entirely close skill gaps that exist pre-college
  - Identify and reward colleges that close skill gap for first generation students
- Skills gained in college (and post-college) matter for labor market outcomes.
  - More than social origins; i.e. First generation vs Multi generation status
- Surveys (like PIAAC) should collect the name of the college/university attended so that institutional comparisons can be made

# Thank you!

## Occupational Prestige

OLS model coefficients  
predicting  
Occupational Prestige

Significant differences in occupational  
prestige by graduate degrees.

Hint: PhD is a wise choice!

Control variables: Numeracy Skills,  
Gender, Age, Race/Ethnicity,  
Nativity, Grad school attendance

## Monthly Earnings

OLS model coefficients  
predicting Monthly  
Earnings

Significant differences in monthly earnings by graduate degrees.  
Hint: PhD is not the wisest choice!

Control variables: First generation status, Numeracy Skills, Gender, Age, Race/Ethnicity, Nativity, Grad school attendance
